Table 3. Calibration model: device-measured activity (MIMS/day) regressed on self-reported MET-minutes/week

term	estimate	se	p
(Intercept)	16024.67	208.05	<0.001
splines::ns(met_min_wk, 3)1	3475.31	382.76	<0.001
splines::ns(met_min_wk, 3)2	3693.98	484.49	<0.001
splines::ns(met_min_wk, 3)3	1929.81	1074.33	0.072
age	-78.36	3.47	<0.001
female	964.85	259.66	<0.001
age:female	2.73	4.74	0.564

Linear model with natural cubic spline (3 df) on self-reported MET-min/week plus age-by-sex interaction; n = 7,854. R2 = 0.191; residual SD = 3335. Monotonicity enforced by cumulative maximum for the MET->MIMS mapping used
