Table 3 (panel b). Reporting bias: device-measured activity by self-reported guideline status

Self-reported guideline status	Device MIMS/day (mean)	N
Meets 600 MET-min/wk	13908	4,608
Below 600 MET-min/wk	12431	3,246

Self-reported meeting of the 600 MET-min/week guideline vs device-measured mean activity; the gap quantifies self-report overestimation.
